

Liberty Mutual prioritizes sustainable and socially conscious efforts that benefit all people, the planet and our society—and we choose to partner with companies and suppliers who share our commitment to these practices.

As part of that commitment, we've chosen EcoVadis, a global business sustainability rating company, to help us understand our supply chain partners' environmental and sustainable practices, as well as their efforts to drive social good. To foster supply chain resilience and ensure that practices align with our goals, all of our suppliers are asked to register on the [EcoVadis platform](#) and complete the assessment that analyzes sustainability performance. The assessment results in a scorecard with detailed insights into supplier strengths and areas for improvement. Results are used as part of our sourcing process today and will allow us to monitor and improve the sustainability performance of our suppliers in the future. We aim to have all of our partners complete this assessment to demonstrate their commitment to sustainability and our continued partnership.
